

Black Shield

The surface hardening of metals

GAUDENZI

SINCE 1891

Black Shield

The surface hardening of metals

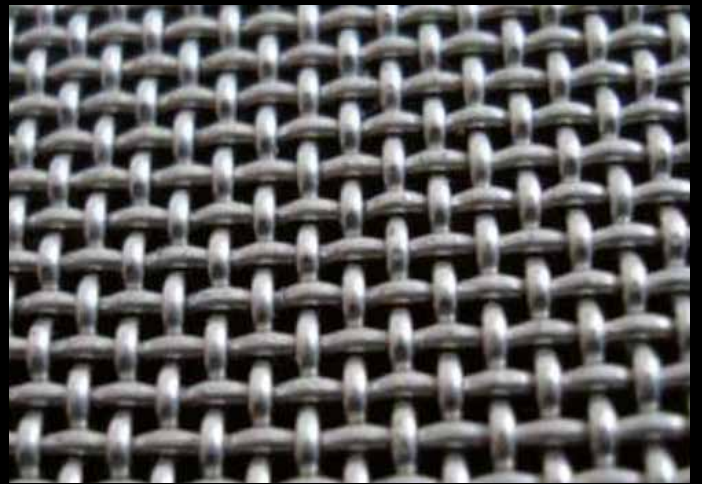

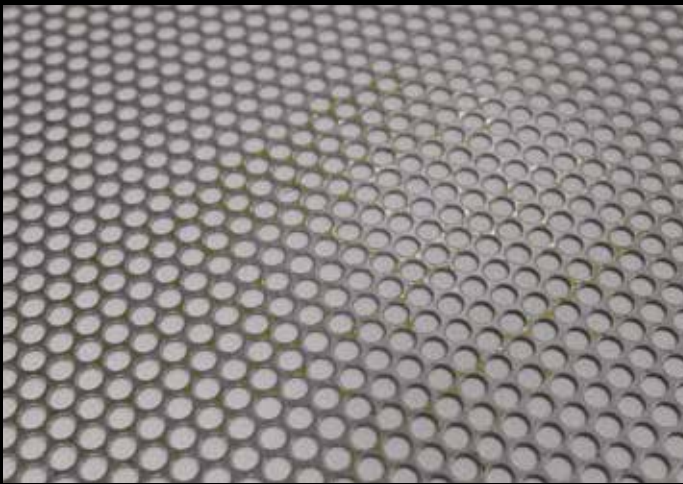

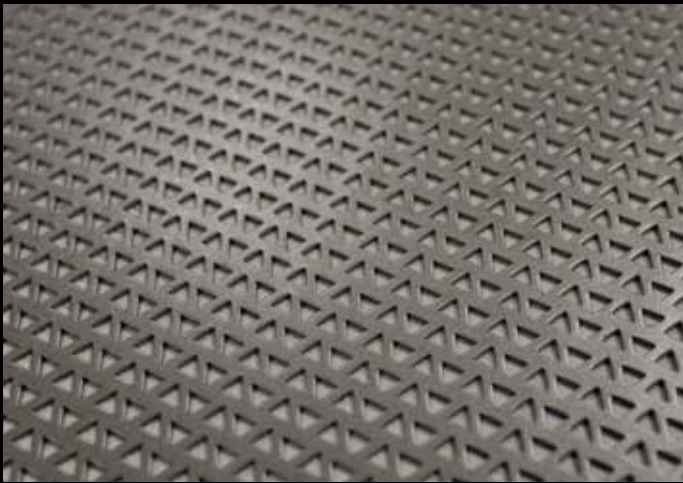

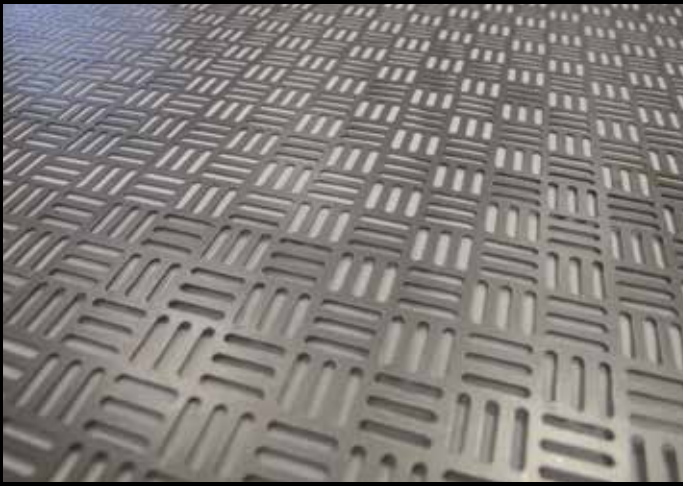

- Increases surface hardening
- Improves the corrosion resistance
- Reduces friction coefficient
- Makes the surface self-lubricating
- There is no filler material
- Hardening of all surfaces, even on small holes
- The worn material can be re-treated to obtain the same properties
- The treated material retains the characteristics of recyclability
- No changes in size, no deformation of the structure

Benefits

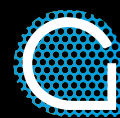

- Less wear = less need for replacement.
- Treated material can be used in applications subject to higher levels of corrosion compared to untreated material.
- Less surface stress in coupling of mechanical parts and surface viscosity increase.

GAUDENZI SRL
PRODUCES **BLACK SHIELD**,
PERFORATED SHEETS, WIRE
MESHES AND FILTERS
ACCORDING TO CUSTOMER'S
DRAWING.

CUSTOMIZED QUALITY
AND EXPERIENCE
MADE IN ITALY SINCE 1891
